

# TALLER BLOCKCHAIN

## DISEÑO Y DESPLIEGUE DE UNA RED BLOCKCHAIN (2DA PARTE)

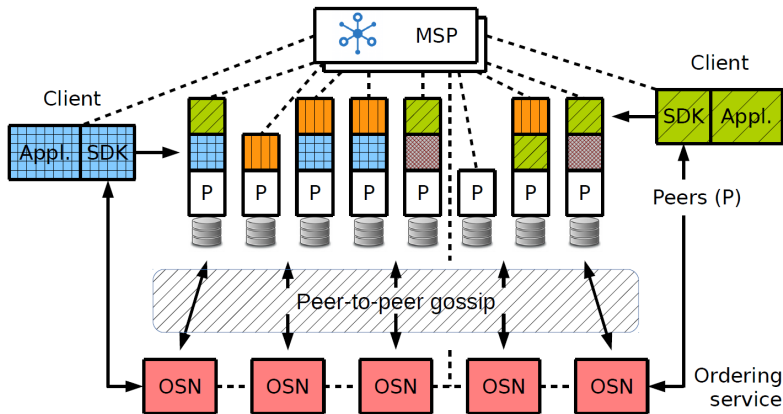

Dr. Iván S. Razo-Zapata

Dr. Alberto F. Martínez

Día 4, Viernes 5 de Marzo, 2021

- Despliegue de red blockchain con scripts automatizados (2da parte)
- Método de diseño
- Conformación de equipos de trabajo
- Herramientas de diseño
- Trabajo en equipos - diseño general
- Presentación
- Trabajo en equipos - arquitectura de solución

# HYPERLEDGER FABRIC

# PRINCIPALES ARCHIVOS DE CONFIGURACIÓN

- `crypto-config.yaml`
- `configtx.yaml` \*
- `base/docker-compose-base.yaml`
- `base/peer-base.yaml` \*\*
- `docker-compose-cli.yaml`
- `docker-compose-couch.yaml`
- `docker-compose-ca.yaml`

● \* Políticas de membresía

● \*\* Posiblemente nada que modificar

- byfn.sh
- scripts/script.sh
- scripts/utls.sh
- ccp-generate.sh

# PRINCIPALES ARCHIVOS DE EJECUCIÓN - BYFN.SH

- networkUp

- Genera Certs con cryptogen
- Genera Channel Artifacts con configtxgen
- docker-compose

- networkDown

```
function networkUp() {  
    checkPrereqs  
    # Start the Network  
    # generate artifacts if they don't exist  
    if [ ! -d "crypto-config" ]; then  
        generateCerts  
        replacePrivateKey  
        generateChannelArtifacts  
    fi  
  
    COMPOSE_FILES="-f ${COMPOSE_FILE}"  
    if [ "${CERTIFICATE_AUTHORITIES}" == "true" ]; then  
        COMPOSE_FILES="${COMPOSE_FILES} -f ${COMPOSE_FILE_CA}" #peer0.org1.risks.org #author1.department1.university1.org  
        export BYFN_CA1_PRIVATE_KEY=$(cd crypto-config/peerOrganizations/department1.university1.edu/ca && ls *_sk)  
        export BYFN_CA2_PRIVATE_KEY=$(cd crypto-config/peerOrganizations/department2.university2.edu/ca && ls *_sk)  
        export BYFN_CA3_PRIVATE_KEY=$(cd crypto-config/peerOrganizations/department3.university3.edu/ca && ls *_sk)  
    fi  
  
    COMPOSE_FILES="${COMPOSE_FILES} -f ${COMPOSE_FILE_COUCH}"  
    echo "===== Starting Network ====="  
    echo "===== Starting Network ====="  
    echo "===== Starting Network ====="  
    echo "${COMPOSE_FILES}"  
    # Start the Network  
    IMAGE_TAG=${IMAGETAG} docker-compose ${COMPOSE_FILES} up -d >&&1  
    docker ps -a  
    if [ $? -ne 0 ]; then  
        echo "ERROR !!!! Unable to start network"  
        exit 1  
    fi  
}
```

# PRINCIPALES ARCHIVOS DE EJECUCIÓN

- networkUp
- Resuelve dependencias del chaincode
- Ejecuta scripts/script-s/script.sh
- Ejecución es en **cli**

```
# HDW for v2.0
echo "Valor de NO_CHAINCODE ..."
echo $NO_CHAINCODE

# Getting dependencies for Chaincode
# Careful with location ... needs to be updated
if [ "${NO_CHAINCODE}" != "true" ]; then
    echo Vendoring Go dependencies ...
    pushd ../chaincode/abstore/go
    #GOL11MODULE=on
    go mod vendor
    popd
    echo Finished vendoring Go dependencies
fi

# now run the end to end script
docker exec cli scripts/script.sh $CHANNEL_NAME_1 $CHANNEL_NAME_2 $CLI_DELAY $LANGUAGE $CLI_TIMEOUT $VERBOSE $NO_CHAINCODE
if [ $? -ne 0 ]; then
    echo "ERROR !!!! Test failed"
    exit 1
fi
```

# HYPERLEDGER FABRIC - MSP

- ◇ Membership Service Provider (MSP)
- ◇ Responsable de asociar nodos con sus identidades criptograficas
- ◇ Mantiene la naturaleza permitida de Fabric

**Membership service provider.** Ayuda a determinar que elemento tiene derecho a qué en la red (control de acceso y de recursos). Algunos tendrán derecho a:

- Leer.
- Escribir.
- Validar transacciones.

## Policies

- Conjunto de reglas de operación e interacción que existen en entre organizaciones
- Relacionada con la red Blockchain, es un conjunto de reglas de operación e interacción que existen en una red Blockchain
- configtx.yaml

## Elementos en configtx.yaml

- Organization
